PROBLEM STATEMENT:

Health care reform is currently one of the most divisive issues. Though with the growth of technology, a software for uniting all hospital in a single platform is not adaptable by hospitals and patients. The complaint portal is not available for patients to raise their issues to the concerned authority.

AREAS OF FOCUS

01

UNITING HOSPITALS UNDER SINGLE APP

This app finds a solution to unite all the hospitals in a single app by updating the total number of available beds, doctors present in the particular time at particular hospital.

02

MAINTAINING THE PAST RECORDS

This app helps to maintain the past medical records(including prescription details,other medical related reports,etc.,.). The appointment to the doctor can be done with the help of this app and the medical records can be accessed by him with the prior permission of the patients.

03

RAISING COMPLAINT

The uniqueness of this app is that it contains complaint portal. The complaints raised by the patients are send to respective authority and necessary actions taken accordingly.

04

ORGANISING THE PAYMENT

The payments for the medical expenses can be done with this app.This helps the government to check the original pricing of the hospital.

TECH STACK:

FRONTEND: HTML,CSS,ReactJs

BACKEND: Java

DATABASE: MYSQL

API:Google Maps API

USE CASE:
